

Consulting Services

Layout & Design

Who Is This For?

Bodyshop owner who is looking to relocate or renovate

Our Planning Services Can Address:

- ◆ Production layout and work flow
- ◆ Type of collision work performed
- ◆ Production work bay allocation

This Service Will Provide:

- ◆ Sample shop designs for your review
- ◆ Recommendations for updating existing refinish equipment or purchase of new to meet proposed production demands
- ◆ Recommendations on work force utilisation
- ◆ Requirements for compressed air, shop lighting, electrical loads and natural or propane gas loads
- ◆ A floor plan tailored to your expectations and growth

Body Shop Survey and Design Process

To get started, an Acoat® selected Business Consultant will contact you to discuss your current situation, review your needs and complete the Facility Planning Questionnaire. We'll discuss sample plans, sketches and site plans. Next, we follow up with preliminary drawings for your review. Then your ideas and our recommendations are incorporated into a comprehensive facility plan that maximises your process flow and productivity. The final step is to provide you with the final plan and a letter of recommendation.

Why We Are Different!

Choosing a facility planning service is an important step in the development of a total repair facility. With over 30 years of experience in facility planning Akzo Nobel has the resources and industry understanding to help you plan your shop for today's needs and tomorrow's growth. We act as consultants to our customers to combine their individual requirements with an overall facility configuration to create a productive and efficient facility.

Akzo Nobel's Facility Planning department can assist you in planning a new facility or expanding or reorganising your existing shop with over 30 years experience.

"The project we undertook of the integration of three individual shops into a single purpose build facility was a huge undertaking. The involvement of Acoat selected throughout all steps in the process ensured that we built and equipped a world class facility designed for maximum efficiency and workflow to meet our current and future needs".
